

AGA201C Assessment 2 Checklist

Student Name	Alex de Prazer
Github Link (ensure it is public)	https://github.com/EmptySquid/FPS_Game

Assessment Introduction

In this assessment, you will demonstrate your ability to replicate and refine gameplay mechanics taught in class using Unreal Engine. This exercise will help you build a deeper understanding of game mechanics and reinforce your technical skills, rather than on the creative/visual side of things. You are expected to document and showcase your mechanics, as well as any improvements or refinements you have made, and justify how they work in the context of your game.

NOTE: Include and show attempts made even if they were not successful. You will be awarded marks for showing you tried and your processes.

IMPORTANT!

Please follow the instructions exactly.

Failure to submit in the required format will result in lost marks and indicate that you did not properly read the brief. In a professional environment, failing to follow submission guidelines can result in projects being rejected outright.

Submission Tasks

☒	A single .zip file to the OneDrive link containing:
☒	:: Unreal Project Folder.
☒	:: A PDF document with at least eight screenshots and short descriptions explaining how you refined the mechanics learned in class and justify their inclusion in your game.
☒	:: This spreadsheet completed.
☒	Signed cover sheet uploaded to Turn It In.
☒	GitHub link supplied above and repository set to public.
☒	File name follows format: FirstName_LastName_UnitCode_AssessmentNumber (Aye_Gamer_AGA201C_A2.zip)
☒	Below tasks checked off (do not check off if you have not attempted).

Week 5 Tasks	Notes
☒ Complete and refine the in-class tasks	Targets functionality.
☒ Level Design	Level accommodates new mechanics.
☒ Extra Functionality Blueprints	Expand upon the Target mechanics.
☒ Extra Functionality Documentation	Screenshots of your blueprints(s) and feature in-game, and justification of why you implemented this feature.
Week 6 Tasks	Notes
☒ Complete and refine the in-class tasks	Lock & Key functionality and appropriate level design.
☒ Level Design	Level accommodates new mechanics.
☒ Extra Functionality Blueprints	Expand upon the Lock & Key mechanics.
☒ Extra Functionality Documentation	Screenshots of your blueprints(s) and feature in-game, and justification of why you implemented this feature.
Week 7 Tasks	Notes
☒ Complete and refine the in-class tasks	Flashlight and stealth functionality.
☒ Level Design	Level accommodates new mechanics.
☒ Extra Functionality Blueprints	Expand upon the horror/stealth mechanics.
☒ Extra Functionality Documentation	Screenshots of your blueprints(s) and feature in-game, and justification of why you implemented this feature.
Week 8 Tasks	Notes
☒ Complete and refine the in-class tasks	UI in-game functionality, game win/lose screen functionality.
☒ UI Design	UI is designed to fit with the game.
☒ Extra Functionality Blueprints	Expand upon the UI. Make a functioning title screen.
☒ Extra Functionality Documentation	Screenshots of your blueprints(s) and feature in-game, and justification of why you implemented this feature.
☒ Project Management & Organisation	Ensure your work is well organised, sorted into folders, blueprints are neatly laid out and uses good naming conventions and comments
